

Compost Blanket Seeding blends the advantages of seeding with quicker establishment rates to reduce erosion and produces a lawn that you can enjoy much faster than conventional seeding methods.

The benefits of Compost Blanket Seeding over traditional lawn establishment methods are many. You'll be able to enjoy a healthy established lawn in less time with our innovative method of turf establishment. We process yard waste into beneficial compost that creates the perfect seed bed for turf grass. Compost Blanket Seeding is more price competitive than sodding and better for the environment than routine grading and seeding methods.

Why use Red B Select™ Compost Blanket Seeding?

- Use any blend of grass seed to match the site needs, even shady conditions.
- Our certified compost is weed free, giving your new grass plants an advantage against weeds in getting established.
- We use our own products to hold additional moisture close to the seed which increases germination rates!
- We also mix a high quality starter fertilizer to give your new lawn the nutrition it needs.
- Included with your Compost Blanket Seeding is free rental of our temporary irrigation system for three weeks.
- Compost Blanket Seeded lawns can establish up to 60% faster than conventional lawn seeding.
- Good for the environment! Compost helps restore soil health and adds valuable organic matter to your lawn, helping to reduce erosion.
