

# SiltSoxx™

*Advanced Erosion Control Technology*

SiltSoxx™ is an environmentally friendly alternative to traditional silt fence for erosion control. Extruded on site, delivered on pallets of 80 feet or 10 foot sections, SiltSoxx™ is a mesh tube filled with an active, bio-based filter media. Water is designed to flow through the sock, not pond behind it. Sediment is filtered out and clean water exits the site. No more collapsed silt fence!

**Use SiltSoxx™ anywhere sediment protection is needed:**

- Perimeter Protection • Ditch Checks
- Inlet Protection • Concrete Wash-outs

SiltSoxx™ require no trenching, making it the ideal product for use on frozen ground or in sensitive areas such as woodlands, wetlands, etc.

SiltSoxx™ is a durable, ecologically sound alternative to erosion control. For more information and pricing, please call:
